

Sample Project Documentation

Project Name: ComicCraft – AI Comic Story Creator using Gemini Models

Academic Year: 2026

A concise evaluator-facing project description.

Project Description

ComicCraft is an AI-powered comic story creator built with Streamlit and Google Gemini models. A user enters a story idea and the application generates a five-panel comic narrative containing scene descriptions, character actions, dialogue and detailed image prompts.

Scenarios

Scenario 1: A student enters a fantasy story idea and receives five structured panels.

Scenario 2: A hobbyist uses the generated image prompts as input for an illustration workflow.

Scenario 3: A content creator downloads the generated story as a text file for editing.

Technical Architecture

The application uses a Streamlit presentation layer, Python-based prompt and parsing logic, the Google GenAI SDK for Gemini API calls, environment-based API key configuration, and text-file export. The current project does not require a database.
