

Coding & Solution

Project Name: ComicCraft – AI Comic Story Creator using Gemini Models

Academic Year: 2026

Implementation summary based on the submitted source code.

Core Workflow

1. Load environment variables.
2. Create a Google GenAI client using GEMINI_API_KEY.
3. Collect a story idea through Streamlit.
4. Construct a prompt requesting exactly five panels.
5. Request scene, action, dialogue and image prompt for every panel.
6. Request consistent character identity and appearance.
7. Parse the response into panels and render the output.
8. Provide downloadable story content.

Model Integration

The submitted code calls Gemini through the Google GenAI SDK. The Streamlit application uses a text-generation model for the structured story and contains an image-generation helper for a Gemini image model.

Error Handling

The implementation includes user-facing handling for common 503, 429 and 404 model/API conditions. Other exceptions are displayed to the user for diagnosis.
